Art Unit: 3641

DETAILED ACTION

Claim 13 is an independent claim in that it claims a method rather than a device and thus the application contains a total number of (4) independent claims. Applicant is required to pay an additional fee, due to the additional independent claim.

Drawings

The drawings are objected to under 37 CFR 1.83(a) because they fail to show the deployment of the invention (figure 1, stage 1), which states that the invention is deployed from the aft deck of a ship, page 5 lines 6-7, as described in the specification. Any structural detail that is essential for a proper understanding of the disclosed invention should be shown in the drawing. MPEP § 608.02(d). A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Specification

As stated in 37 CFR 1.77(b), the headings should appear in upper case, without underlining or bold type.

The disclosure is objected to because of the following informality: The usage of the phrase "These devices are thrown to a distance from the aft deck P of a ship, implementing dagaie type dispersion in air", page 5 lines 6-8, is unclear as it pertains to the implementation of the invention, since it is well known in the art that the term "Dagaie" is a countermeasure apparatus, not a method of decoy dispersion.

Appropriate correction is required.

Art Unit: 3641

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 3 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. The function "has been sinking", line 5, is not supported by claimed structure.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3, 6-9, 11, and 12 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by U.S. Patent No. 2,637,536 to De Ment.

In regards to claim 1, De Ment clearly illustrates a device comprising of a body of effervescent material that reacts with sea water to generate a cloud of bubbles capable of simulating a phony wake, the device being characterized in that it has a covering of material that is soluble in sea water, which delays the reaction of the effervescent material with sea water, in column 6 lines 23-30.

In regards to claim 2, De Ment clearly illustrates a device according to claim 1, characterized in that the covering is made of organic material, in column 6 lines 23-30.

In regards to claim 3, De Ment clearly illustrates a device according to claim 2, characterized in that a thickness of the covering is calibrated, so that when said device is

Application/Control Number: 10/020,736

Art Unit: 3641

immersed, the effervescent material begins to react with sea water only after said device has been sinking for a predetermined length of time, in column 4 lines 60-65 and column 6 lines 23-30.

In regards to claim 6, De Ment clearly illustrates a device according to claim 1, characterized in that the effervescent material comprises a mixture of tartaric acid and of sodium hydrogen carbonate, in column 5 lines 25-30 and lines 42-62.

In regards to claim 7, De Ment clearly illustrates a device according to claim 1, characterized in that the effervescent material comprises a mixture of citric acid and of sodium hydrogen carbonate, in column 5 lines 25-30 and lines 42-62.

In regards to claim 8, De Ment clearly illustrates a device according to claim 7, characterized in that the mixture is substantially stoichiometric, in column 5 lines 25-40 and lines 42-62.

In regards to claim 9, De Ment clearly illustrates a device according to claim 1, characterized in that the effervescent material includes a lubricant, in column 6 lines 1-9.

In regards to claim 12, De Ment clearly illustrates a device according to claim 1, characterized in that it further includes ballast-forming means, for the purpose of enabling it to sink faster, in column 4 lines 60-65.

In regards to claim 11, De Ment discloses the claimed invention except for illustrating that the dimensions of the bubbles that are generated at a depth of 10 meters are in the range of $30\mu m$ to $50\mu m$. Since De Ment has the same material as that claimed including a weighted mass that would allow the device to sink to 10 meters, the device would inherently have the same characteristics and thus the same bubble size as claimed.

Application/Control Number: 10/020,736 Page 5

Art Unit: 3641

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claim 5 is rejected under 35 U.S.C. 103(a) as being unpatentable over De Ment.

De Ment discloses the claimed invention except for describing that the covering is made of a material, which is a gum of vegetable or animal origin. It would have been obvious to one having ordinary skill in the art at the time the invention was made to use a sugar as a delayed action covering, since it was known in the art that high-polymer sugars occur as water-soluble gums such as arabic, which is produced from the dried water-soluble exudate from the stem of Acacia Senegal or related species.

Allowable Subject Matter

The following is an examiner's statement of reasons for allowance:

Application/Control Number: 10/020,736 Page 6

Art Unit: 3641

Claim 10 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claim 13 is allowed, since the art of record does not show alone or in combination: a torpedo decoying method, having the features according to claim 1, which are dispersed in the sea from the air.

Claim 14 is allowed.

Claim 15 is allowed, since the art of record does not show alone or in combination: wherein a thickness of the covering is calibrated so that when said device is immersed, the effervescent material begins to react with sea water only after said device has been sinking for a predetermined length of time and is at a depth of about 10 meters.

Claim 16 is allowed, since the art of record does not show alone or in combination: wherein a thickness of the covering is calibrated so that when said device is immersed, the effervescent material begins to react with sea water only after said device has been sinking for a predetermined length of time and is at a depth of about 10 meters.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Response to Arguments

Applicant's arguments with respect to claim 1 have been considered but are moot in view of the new ground(s) of rejection.

Application/Control Number: 10/020,736

Art Unit: 3641

Conclusion

Page 7

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The following documents show the state of the art in the field of Torpedo Decoys.

U.S. Patent No. 5,127,945 to Miller

U.S. Patent No. 3,841,219 to Schillreff

U.S. Patent No. 3,506,086 to McGann et al.

Non-Patent Document: The Condensed Chemical Dictionary

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Henry A. Blackner whose telephone number is 703-305-4799.

The examiner can normally be reached on 09:15 - 17:45.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael Carone can be reached on 703-306-4198. The fax phone numbers for the organization where this application or proceeding is assigned are 703-306-4196 for regular communications and 703-305-3597 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703-306-5771.
